“ See life beyond the material physical form which inhibits a clarity higher than one experienced in the former dimension or plane of perception and thought”- Katherine F Espinosa.

Seeing life beyond the material physical form suggests an experience or perspective that transcends the limitations of our physical senses and the material world around us.

It implies that there is a deeper or more profound level of perception and understanding that is accessible to us if we are able to look beyond the surface appearance of things. Inhibiting a clarity higher than one experienced in the former dimension or plane of perception and thought means that this deeper level of perception and understanding is

associated with a higher level of clarity or insight than what is possible through our ordinary senses and ways of thinking.

We are implying that our usual mode of perception and thought may be limiting our ability to see the world in a more complete or accurate way.

Look beyond the material world and our usual ways of perceiving and understanding it, in order to access a deeper level of insight and clarity about the nature of life and reality.
